2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **oussama-ezitouni.com** for a **Personal Portfolio / Personal Brand** site, generated on July 17, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

74/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Critical:** About-section stats render '0+' to AI crawlers (GSAP count-up starts at zero server-side)
2. **Critical:** Security headers missing at application layer (X-Content-Type-Options, Referrer-Policy, X-Frame-Options)
3. **High:** JSON-LD errors: invalid worksFor.location property, mailto: prefix on email, knowsAbout lists Next.js 15 + TypeScript (site is Next.js 16, JavaScript)
4. **High:** Zero external corroboration: DEV.to, npm package, and Nlivrilik are claimed but never linked — weakest E-E-A-T dimension (Authority 13/25)
5. **Medium:** H1 says 'Full-stack Engineer' while metadata/JSON-LD/lms.txt say 'Senior Full-Stack Engineer' — entity inconsistency

2. Audit Categories

2.1 Technical SEO

Score: **76/100**

What Works

- robots.txt, sitemap.xml, llms.txt all serve HTTP 200 with correct canonical domain
- Proper 404 handling (no soft-404s)
- Self-referential canonical + optimal robots meta (index, follow, max-image-preview:large)
- Full SSR — 'Oussama', 'Intelcia', 'Woolf', 'journey' all present in raw HTML
- Title 53 chars (optimal); OG + Twitter cards complete

Findings

Security headers absent **Critical**

X-Content-Type-Options, Referrer-Policy, X-Frame-Options, Permissions-Policy missing; X-Powered-By: Next.js leaks framework fingerprint.

Recommendation: Add headers() block to next.config.js and set poweredByHeader: false. Verify post-deploy with curl -sI.

No IndexNow implementation **High**

Bing/Yandex/Naver rely on organic crawl discovery; indexing lag of days instead of minutes.

Recommendation: Generate key at bing.com/indexnow, serve /[key].txt, POST to api.indexnow.org on each deploy.

Meta description 198 chars **Low**

Google truncates around 160 characters in most SERP layouts.

Recommendation: Trim to ~155 chars.

LCP element is animated text **Medium**

Hero H1 sits inside GSAP entrance animation; if initial state were CSS opacity:0 the LCP would be delayed. Currently GSAP sets state client-side (correct pattern) — verify in field data.

Recommendation: Confirm H1 visible with JS disabled; monitor CrUX after deploy.

2.2 Content Quality (E-E-A-T)

Score: **58/100**

What Works

- Authentic first-person voice, no AI-content markers
- Specific, verifiable-in-principle claims (40% faster, 50+ institutions, 120+ repos)
- Honest credential framing (M.Sc. marked 'in progress')
- Granular stack depth (PRADO alongside Symfony signals genuine PHP history)

Findings

Zero external corroboration links **High**

Authority scored 13/25 — DEV.to writing, npm package (100+ weekly downloads), and Nlivrilik are all claimed in body copy but none are linked. Google cannot follow signals it cannot crawl.

Recommendation: Link DEV.to profile, name + link the npm package, link Nlivrilik from the timeline card; add DEV.to to sameAs.

Borderline thin content (~560 prose words) **Medium**

Clears the 500-word homepage floor but short of the ~800-word professional-profile benchmark for commercial queries.

Recommendation: Add one named project per vertical (fintech, insurance, recruitment, education) with a single outcome metric each (~150-200 words).

Superlative claims without methodology **Medium**

'Without a minute of downtime', '10x the traffic headroom', 'millions of users' would be flagged by Quality Rater Guidelines as unverifiable superlatives.

Recommendation: Qualify with method ('blue-green migration — no service interruption') or soften.

No service description for commercial queries **Medium**

Contact section has no engagement model, deliverable types, or scope — 'hire full-stack engineer Morocco' query class has zero coverage.

Recommendation: Add 2-3 sentences describing engagement types near the contact form.

2.3 On-Page SEO

Score: **85/100**

What Works

- Title template, canonical, keywords (with 10 name variants), authors/creator metadata all correct
- Heading hierarchy valid on all viewports (h2 → h3 fixed for mobile)
- Root-relative anchor navigation works from any route including 404

Findings

H1 drops 'Senior' **Medium**

Visible H1 reads 'Full-stack Engineer.' while title tag, JSON-LD jobTitle, and llms.txt all say 'Senior Full-Stack Engineer' — weakens seniority-qualified entity cluster.

Recommendation: Change hero headline to include 'Senior' or add a 'Senior' kicker line.

Location + availability hidden on mobile hero **Medium**

The only hero text with 'Morocco-based' and freelance availability is hidden below lg: breakpoint — most recruiter first-passes are on phones.

Recommendation: Add a one-line 'Morocco · Available for freelance' under the H1 on small screens.

2.4 Schema / Structured Data

Score: **74/100**

What Works

- Server-rendered JSON-LD @graph: Person + WebSite + ProfilePage, all @id cross-references resolve
- No localhost contamination — all URLs use canonical production origin
- alternateName: 9 variants (misspellings, reversed order, handle forms)
- Correctly omits deprecated types (HowTo, FAQPage rich results retired May 2026)

Findings

worksFor.location is not a valid schema.org property **High**

Organization has no 'location' property; parsers silently drop it.

Recommendation: Replace with address: PostalAddress (addressLocality: Rabat, addressCountry: MA) and add url: intelcia.com.

email carries mailto: prefix Medium

Person.email expects the bare address string.

Recommendation: Change to 'ezitounioussama@gmail.com'.

knowsAbout factually wrong Medium

Lists 'Next.js 15' and 'TypeScript' — site is Next.js 16, JavaScript-only.

Recommendation: Update STACK in lib/data.js.

Missing high-value properties Low

alumniOf (Woolf University, Université Mohammed V), image as ImageObject with dimensions, nationality, ProfilePage dateModified.

Recommendation: Add alumniOf + ImageObject + nationality (ready-made snippets provided in audit).

2.5 Performance (Core Web Vitals, lab)

Score: 92/100

What Works

- LCP 135ms, CLS 0.00, TTFB 11ms (Chrome trace, production build)
- All animation transform/opacity-based — zero layout shift measured
- Three.js render loop gated to viewport visibility; DPR capped at 1.75
- Fonts self-hosted via next/font with preload

Findings

favicon.ico is 244KB Medium

A 32px icon weighing a quarter megabyte, fetched on first visit by every browser and crawler.

Recommendation: Re-export as multi-size .ico ≤30KB or serve a 32/180px PNG set.

INP unverified under animation load Medium

pointermove listeners (hero parallax, tech-stack proximity pop) + pinned scroll scrub are main-thread work; lab INP fine but field data needed, INP replaced FID as the CWV.

Recommendation: Monitor CrUX INP after 28 days of traffic; budget: <200ms.

~42 external icon requests on Stack section **Low**

simpleicons.org CDN requests are lazy-loaded below the fold — acceptable; adds third-party dependency.

Recommendation: Optional: vendor SVGs into /public/icons at build time.

2.6 AI Search Readiness (GEO)

Score: **63/100**

What Works

- GPTBot, OAI-SearchBot, ClaudeBot, PerplexityBot explicitly allowed in robots.txt
- llms.txt passes all 9 llmstxt.org structural checks with markdown links and name-variant disambiguation
- Timeline copy contains strong citable claims (40% faster, 50+ institutions, Nlivrilik)

Findings

Count-up stats serve '0+' to non-JS crawlers **Critical**

GPTBot/ClaudeBot/PerplexityBot read '0+ Years building, 0+ Apps shipped, 0+ Institutions served, 0+ Public repos' — the four key quantified claims are zeroed for AI.

Recommendation: SSR the real values ('3+') as initial DOM; let GSAP animate in place as progressive enhancement.

llms.txt blockquote too short (50 words vs 134-167 optimal) **Medium**

The primary passage LLMs quote for 'Who is Oussama Ezitouni?' is a compressed tagline.

Recommendation: Expand to ~150 words; split the 190-word experience mega-bullet into per-role bullets; add Updated: date.

Entity gaps in sameAs **Medium**

DEV.to and Twitter/X (@ezitounioussama is in twitter:creator) missing from sameAs and llms.txt Links.

Recommendation: Add both platform URLs to sameAs + llms.txt.

No YouTube/Reddit presence **Low**

YouTube mentions correlate ~0.74 with AI citations — the strongest measured signal; currently zero multi-modal footprint.

Recommendation: Long-term: publish one recorded technical talk; participate genuinely in r/webdev / r/nextjs.

2.7 Search Experience (SXO)

Score: **56/100**

What Works

- Ranks #1 for the navigational brand query (live SERP verification)
- Peer-developer persona scores 87/100 — the site itself is proof of craft
- Correct page type (ProfilePage) for the only realistically winnable query class

Findings

No CV download **High**

Recruiter persona Action score 10/25 — every competitive senior portfolio in the benchmark SERP has a resume download above the fold.

Recommendation: Add /cv.pdf with download links in hero top bar and About availability row.

Freelance-client conversion layer absent **High**

Persona scores 47/100: no service scope, engagement model, pricing signal, testimonials, or project links. Page 'sells like a blank agency page'.

Recommendation: 3 project cards with outcome metrics + one testimonial/LinkedIn recommendation quote + engagement blurb.

'freelance developer morocco' SERP is 100% marketplaces **Medium**

Structurally unwinnable for a fresh personal domain — all top-10 results are Twine/Arc.dev/AfricaShore-type directories.

Recommendation: Create profiles on Arc.dev + AfricaShore linking back (also the first quality backlinks).

No project case-study URLs **Medium**

Single-URL site gives Google one shot at one intent; competitor portfolio ranking for 'react developer morocco' has a crawlable Projects section.

Recommendation: Add case-study cards now; consider separate case-study URLs later.

2.8 Images

Score: **78/100**

What Works

- Portrait via next/image with descriptive alt; displayed $\leq$ native size
- Dynamic OG image (1200×630) generated at build with next/og
- Decorative visuals correctly aria-hidden with empty alt

Findings

favicon.ico 244KB Medium

Same finding as Performance — outsized icon file.

Recommendation: Compress to $\leq$ 30KB.

No project imagery Medium

Zero screenshots of delivered work — a trust gap for recruiter and client personas (Media 8/15 in SXO).

Recommendation: Add one screenshot per future case-study card.

3. Action Plan

Phase 1 — Critical (at deploy) Deploy day

- Deploy to production; set NEXT_PUBLIC_SITE_URL=https://oussama-ezitouni.com; submit sitemap to Google Search Console + Bing Webmaster Tools (verify: URL Inspection shows indexed)
- Add security headers to next.config.js (X-Content-Type-Options, Referrer-Policy, X-Frame-Options, Permissions-Policy) + poweredByHeader:false (verify: curl -sI)
- Fix JSON-LD: worksFor.location → address, strip mailto: from email, correct knowsAbout to Next.js 16 / JavaScript (verify: Rich Results Test)
- Fix count-up stats SSR so crawlers read real values, not '0+' (verify: curl shows '3+')

Phase 2 — High (week 1) Week 1

- Align H1 to 'Senior Full-stack Engineer.'
- Link the proof: DEV.to profile, npm package by name, Nlivilik URL in body; add DEV.to + X to sameAs and llms.txt
- Add /cv.pdf download + visible hire CTA (hero + About)
- Add 'Morocco · Available for freelance' line to mobile hero

Phase 3 — Medium (month 1) Month 1

- Expand llms.txt blockquote to ~150 words; per-role experience bullets; Updated: date
- One named project per vertical with outcome metric (+~200 words, kills thin-content risk)
- One testimonial or LinkedIn recommendation quote
- Schema enhancements: alumniOf, image as ImageObject, nationality
- Soften superlative claims with methodology qualifiers
- IndexNow key + deploy-hook ping; slim favicon to ≤30KB

Phase 4 — Growth (ongoing) Quarter

- Arc.dev + AfricaShore profiles linking back (first quality backlinks + marketplace SERP presence)
- Publish one recorded technical talk on YouTube (strongest AI-citation correlator, ~0.74)
- Genuine participation in r/webdev / r/nextjs communities
- Monitor: GSC impressions for name-variant queries; monthly 'who is Oussama Ezitouni?' checks on Perplexity/ChatGPT; CrUX INP field data at 28 days

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — July 17, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
